STREAM. CREATE. EARN.

CRYPTO PROJECT CONCEPT

The future is live.

A proposed community-driven cryptocurrency concept focused on live streaming, digital creators, viewers, gaming and online entertainment.

1. Project overview

STREAM (\$STRM) is a proposed community-driven cryptocurrency designed around the world of live streaming, content creators and digital entertainment. The concept is to connect creators, viewers and online communities through a decentralized ecosystem where content, engagement and participation can have real value.

2. Token identity

Detail	Proposed information
Name	Stream
Ticker	\$STRM
Category	Streaming / Creator Economy
Blockchain	Solana
Token standard	SPL
Total supply	1,000,000,000
Decimals	9

3. Ecosystem utility

- **Creator rewards:** Potential rewards for creators based on participation and engagement.
- **Viewer rewards:** Incentives for community participation.
- **Live tipping:** A proposed way for viewers to send cryptocurrency to streamers.
- **Subscriptions:** Token-powered memberships and creator support.
- **Community access:** Potential access to exclusive creator communities and experiences.
- **Digital entertainment:** Possible integrations with gaming and streaming platforms.

4. Proposed tokenomics

Allocation	Percentage
Liquidity	40%
Community ecosystem	25%
Creator rewards	15%
Marketing	10%
Development	10%

Total	100%
-------	------

These percentages are illustrative proposals only and have not been finalized. Any launch allocation should be reviewed, documented and disclosed before token deployment.

5. Brand direction

Primary color: Electric blue

Secondary color: Black

Accent: White

Style: Modern, minimal and futuristic

Visual symbol: Streaming signal or broadcast waves

6. Mission statement

Streaming is the future. Creators are the foundation. Communities are the power. STREAM aims to bring creators and their audiences closer together by exploring how cryptocurrency can support the streaming experience.

7. Positioning and possible directions

The project could develop in one of several directions: a decentralized streaming platform; a rewards token for streamers and viewers; a gaming and livestreaming token; a streaming-focused memecoin; or a broader Web3 streaming ecosystem. The final direction should be selected before committing to utility claims, development plans or launch communications.

8. Important implementation notes

This document is a concept draft, not a promise that the described products or utilities already exist. Token deployment, smart-contract review, liquidity arrangements, platform integrations, legal review and operational planning would be separate workstreams. Do not describe rewards, subscriptions, tipping or integrations as live features until they have been built, tested and made available.
